Frequently asked Questions about Bilingualism

Will speaking two languages with my child cause a language delay?

- No. Research indicates that speaking two languages will **not** cause speech and language problems.
- Research has shown that a child's total vocabulary (when both languages are combined) will be at least the same size as a child who only speaks one language.
- A child's brain can learn more than one language. In many places around the world children grow up learning more than one language at the same time.
- If a bilingual child is delayed in his/her language development, a speech and language assessment is recommended. For more information about when to refer for a speech and language assessment please visit, <http://www.children.gov.on.ca/htdocs/English/topics/earlychildhood/speechlanguage/index.aspx>

If my child has a speech/language delay, will speaking two languages make the delay worse?

- No. There is **no evidence** that children with a speech and language delay will be more delayed if they hear two languages.
- Research has shown that children with a speech and language delay who hear two languages will have the same difficulties in both languages.

If I don't speak English well, is it okay for me to speak my native language with my child?

- **Yes!** Some parents speak English to their child even when they don't speak it well. They might believe that speaking to their child in English is necessary for their child to learn English. Research however does not support this view.
- Research has highlighted that it is important for parents and caregivers to speak with a child in the language that feels **natural** and **comfortable**. Speaking with a child in a language that is not comfortable may have negative consequences for parent-child connections.
- Maintaining your native language may be important for a number of reasons. There may be family members who only speak that language and there may be a risk of losing your native language if it is not used at home.

How can I help my child learn more than one language?

- Research says a child needs **repeated** and **consistent** exposure to each language. Some parents use:
 - “one parent-one language”: one parent speaks one language to the child; the other parent speaks the other language to the child.
 - “one place-one language”: one language is spoken at home; the other at daycare or at school.
 - “two languages mixed throughout the day”: one or both parents speak both languages to the child throughout the day.

It all works! No one approach is best. Parents should speak to their child in a way that feels comfortable. The key is to provide children with many opportunities to hear, speak, play and interact in both languages.

What if my child mixes both languages?

- Mixing languages is **not** a sign of language delay or difficulty in learning two languages.
- Mixing languages is **common** for children learning two languages. It is natural and should be expected.

What about putting my child with a speech and language delay in a French Immersion program?

- There is very limited research in this area. It seems that children with language impairments may do just as well in bilingual education settings as in English only settings. Keep in mind that children with language impairments need **more support** with learning language **both** at home and at school.
