

EMERGENCY
MANAGEMENT

Shelter-in-Place

If there is concern about an airborne or chemical hazard you may be advised to shelter in place.

Here are some tips:

- Close and lock all windows and exterior doors.
- Turn off all fans, heating and air conditioning systems and close fireplace dampers.
- Shelter in an interior room with no or very few windows that is above ground. Chemicals may seep into basement windows. Bring your emergency kit with you!
- Using duct tape, seal all cracks around the door and any vents into the room.
- If there is danger of an explosion, close the window shades, blinds or curtains.
- Listen to your radio or television for further instructions. Local officials may call for evacuation in specific areas at greatest risk in your community.
